

Smart and innovative zinc-free anticorrosives

HEUCOPHOS[®] & HEUCOSIL[™]

COMPETENCE IN COLOR

Introduction

Besides economic considerations, ecological and regulatory factors play an increasingly decisive role nowadays in the formulation of innovative coating systems. It is therefore no though the periodic table offers several alsurprise that the call for zinc-free anti-corrosive pigments or those that do not require labeling has steadily increased in recent years. Heubach's range of zinc-free modified metal complex anticorrosives provides environmentally friendly solutions even in demanding primer systems fulfilling requirements such as:

- > Highly effective anodic corrosion protection in solvent and water based systems
- > Stability and universal application
- > Very good dispersion properties
- Cost efficiency

Heubach's unique zinc-free anticorrosive with universal applicability

rare cases to combine universal application with very good corrosion protection. Even med by using the HEUCOPHOS® CMP. ternatives to zinc that do not contain heavy metals, only a few metals qualify as suitable be achieved in this system by using HEUCOreplacements.

When making a selection, the emphasis is therefore on possible positive interactions te compounds.

Heubach developed an R&D-program in PHOS® CMP. which various testing procedures demonstrated excellent performance properties when utilizing the synergistic effects proven by using calcium magnesium orthophosphate when compared with straight magnesium phosphate.

The real challenge is that it is only possible in Even the protective effect of the reference sample which contained zinc was outperfor-

> A significant improvement in adhesion and rust creepage at the cross-section could also PHOS[®] CMP.

The results clearly show that the identification and use of synergetic interactions is of between calcium and magnesium phospha- benefit when developing novel, highly effective anti-corrosive pigments like HEUCO-
